## THE EXPERTS IN STREAMLINED GLOBAL SOURCING

At OSANTS we are on a crusade to achieve worldwide recognition as the leader in overseas sourcing services.

We've built a distinguished reputation upon trusted, long-term client relationships forged by our **high quality service and quick response time to client needs**, which are made possible using our unique decentralized business structure focused on the following process:

Auditing your potential suppliers to verify existence as a manufacturer and not a trading company, analyzing supplier operations for quality, and ensuring that a selected supplier does not subcontract production of your products without your approval to unaudited manufacturers.

Placing your purchase orders with the audited suppliers on your behalf, collaborating with the suppliers engineers regarding product specifications and sample procurement for your testing, monitoring the timeline of production to ensure it stays on schedule with promised delivery dates, and issuing production status reports upon your request.

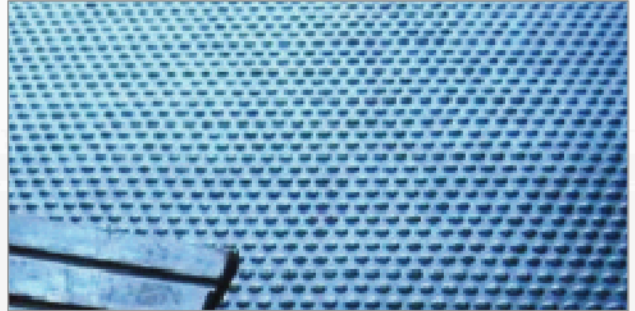

**Performing "Pre-Production Inspections"** of the raw materials to be used in your product production including verification of the material certificates as genuine, inspections of manufacturing equipment to be utilized in the production process, as well as the tooling, molds, gauges, and weld fixtures.

**Performing "During Production Inspections"** (usually unannounced) in order to assess the quality of workmanship, check that final production timelines for completion of manufacturing and product release are on target, and inspect and test the quality of pieces that have already been produced.

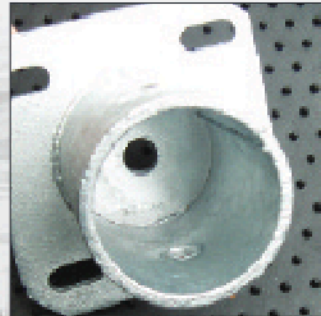

**Performing "Post Production Inspection"** followed by issuance of a final inspection report for your approval. Product shipments will not be released prior to your assessment of our inspection reports and your grant of approval. Our quality control staff utilizes the AQL 1.0 Standard Chart for inspected pieces per lot, plus OSANTS specifically requires our inspectors go 10% above this number of pieces inspected.

We perform inspection of product packaging, check for the inclusion of necessary material and surface treatment certificates, perform counting of the total pieces in the lots ordered, and push vendors to strictly adhere to their promised release dates.
